

Generator Quick Connect Box

Creating Systems to Control, Power & Integrate Your Business

The **CPI Generator Quick Connect System** provides a means to easily and quickly connect a portable (or permanent) generator to a facility during times of extended power outages. This system contains a Service Entrance Circuit Breaker that is Key Interlocked with a Generator Power Entrance Circuit Breaker. This allows for fail-safe operation to tie in Generator Power to the facility while ensuring that you do not back-feed into the Utility Power System. You simply plug the Generator cables into the color coded quick connects, operate the Keyed Circuit breakers and you are back in business. The CPI Generator Quick Connect System is fully weatherproof and is designed to be installed on the back of the facility near the Utility Service Entrance.

Standard System Includes:

- The generator quick connect box is NEMA 3R and will measure 60”H x 36”W x 12”D
- Circuit breaker with Kirk Key attachment and sized for Generator ampacity. (Pre-wired for generator connection)
- Circuit breaker with Kirk Key attachment and sized for utility service entrance ampacity. (Service entrance rated)

System Standards:

- Complete system is UL Listed
- Product meets or exceeds NEC requirements

Electrical Requirements:

- Per Local NEC
