

- *Space Savings > 40%*
- *Labor Savings*
- *5yr Tax Break— Not
30yrs*

- *Standardization*
- *Fast Track Depreciation*
- *Quality Control*

Dear Customer,

Carolina Products, Inc. designs and manufactures innovative unitized electrical switchgear and building control solutions. Many Restaurant/Retail have accepted this concept to reduce construction costs and time.

Space Savings

National Electric Code requires (3) three feet of clearance in front of all electrical equipment. With the **CPI System** you can save 40% or more space over conventional electrical equipment.

Labor Savings

Our systems are factory assembled and tested prior to installation which reduces construction time, electrical installation costs and material costs.

Fast Track Depreciation

IRS tax rules state that the **CPI System** is considered to be capital equipment. Therefore it can be depreciated over 5 years (Accelerated Cost Recovery) verses 30-year depreciation schedule for conventional electrical equipment.

Our systems are custom designed, and 100% tested prior to shipment. This decreases construction time, reduces electrical installation cost and eliminates start-up problems. All of our systems are U.L. listed and comply with all NEC and local electrical codes to ensure an inspector's endorsement. All the above promises a speedy installation, national acceptance and standardization throughout our clients' projects.

A few names that you may recognize utilizing the **CPI System** are **Amoco, Arco, BP, Alliance Energy, Circle K, Delta Sonic, Inland Oil, Cumberland Farms, Murphy Oil, Speedway, Thornton Oil, Marathon Ashland, Shell** and many more.
