

CPI System Advantages

- Space Savings >40%
- Labor Savings
- Energy Saving
- 5yr Tax Break – Not 30yrs

CPI Switchgear designs and manufactures highly innovative unitized electrical switchgear and building control systems. Many restaurant, retail and petroleum chains have recognized benefits such as: savings in space, electrical labor savings, and fast track depreciation.

Standard Design

Consolidation of electrical equipment saves 40% or more space versus conventional gear. 10" Depth makes it easy to place our gear in a recessed area in a wall.

Labor Savings

Our systems are factory assembled and 100% tested prior to installation which reduces construction cost, electrical installation costs and material costs.

Energy Savings

HVAC and light settings can be controlled by time of day and by zone. The CPI System can use energy monitoring to limit peak demand charges.

Fast Track Depreciation

Our CPI System is considered equipment instead of real estate and therefore can be depreciated over 5 years instead of the 30 years that it takes to depreciate conventionally installed gear.

System Details

The CPI System is custom built at our plant and after being tested the system is delivered at the exact time that it is needed on the jobsite; saving on-site manufacturing time, installation time and eliminates start-up problems. All our systems are U.L listed and comply with all NEC as well as local electrical codes to ensure an inspector's endorsement.

A few names that you may recognize that are CPI Switchgear System users:

Hobby Lobby, Tractor Supply, Bojangles, Panera Bread, Darden Restaurants, The Home Depot, Floor & Decor, Lifetime Fitness, Circle K, Speedway and many more.
